Medical Insights Notes (MINS) - Colchicine & Metformin (SYNTHETIC - internal mock)

Colchicine

Cardiologists cite LoDoCo2 and COLCOT as practice-changing; low-dose 0.5 mg colchicine for secondary prevention of atherosclerotic CVD is approved in the US but unavailable as a dedicated product in India. GI tolerability and drug-interaction counselling (CYP3A4/P-gp) are key educational needs. Pericarditis recurrence prevention is another established off-label use.

Metformin

Gynaecologists use metformin off-label in PCOS for insulin resistance; adolescents struggle with GI side-effects of IR tablets. An ER oral suspension with titration pack was requested in 7 of 12 advisory boards. Oncology repurposing evidence (colorectal adjuvant) remains inconclusive and is deprioritised.
