# FY26 Portfolio Diversification Strategy (SYNTHETIC - internal mock)

## 1. Context

US generics margins compressed by 9% YoY; India branded generics growth at 8-10%. The board mandates that 15% of FY28 revenue comes from value-added products: new indications, new dosage forms and new patient populations of approved molecules (505(b)(2) in US; SEC/CDSCO pathway in India).

## 2. Priority therapy areas

Respiratory (paediatric asthma adherence, post-viral chronic cough, bronchiectasis), Cardiovascular (low-dose colchicine for secondary prevention), Women's health (PCOS, pre-eclampsia prevention) and Gastro (eosinophilic esophagitis). Oncology excluded due to capability gaps.

## 3. Selection criteria

Minimum addressable market USD 50 mn, 5-year CAGR above 3%, freedom-to-operate risk at most 7/10, fewer than 15 competing active trials, and API supply not dependent above 60% on a single country. Products with orodispersible films, paediatric suspensions or modified-release profiles are preferred because our Goa plant has spare capacity for films and MR pellets.

## 4. Shortlist under review

Montelukast orodispersible film (paediatric asthma); metformin ER suspension for adolescent PCOS; colchicine 0.5 mg MR for CV prevention; budesonide orodispersible tablet for EoE; bedtime-release aspirin for pre-eclampsia prevention. Each requires a literature and IP review before stage-gate 1.
