varian
A Siemens Healthineers Company

**Job Description:**

**We're looking for a curious, motivated AI Intern to join our team. This is a hands-on role where you'll work alongside engineers and researchers on real AI/ML projects, from prototyping models to deploying them. You'll gain exposure to the full lifecycle of building AI products and have the opportunity to ship work that goes into production.**

**What You'll Do:**

- **Assist in building, training, and evaluating machine learning and deep learning models**
- **Work with large language models (LLMs) — prompt engineering, fine-tuning, RAG pipelines, or agentic workflows**
- **Clean, preprocess, and analyze datasets to support model development**
- **Write clean, well-documented Python code and contribute to internal tools and APIs**
- **Help benchmark model performance and run experiments to improve accuracy and efficiency**
- **Read recent AI research papers and share insights with the team**
- **Collaborate with product, engineering, and design teams to integrate AI features into our products**

**Who You Are:**

- **Final-year or recently graduated student from a B.E. / B.Tech / M.Tech program in Computer Science, AI/ML, Data Science, Electronics, or related fields**
- **Solid programming foundation in Python; familiarity with Git**
- **Hands-on experience (coursework, projects, or hackathons) with at least one ML framework — PyTorch, TensorFlow, or scikit-learn**
- **Understanding of core ML concepts: supervised/unsupervised learning, neural networks, evaluation metrics, overfitting**
- **Comfortable with data manipulation libraries — NumPy, Pandas**
- **Strong problem-solving skills and willingness to learn quickly**
- **Good written and verbal communication**

**Nice to Have:**

- **Experience working with LLMs (OpenAI, Anthropic, Hugging Face) or building chatbots/RAG systems**
- **Familiarity with cloud platforms (AWS, GCP, Azure) or containerization (Docker)**
- **Knowledge of vector databases, embeddings, or LangChain / LlamaIndex**
- **Open-source contributions, Kaggle competitions, or a personal portfolio of AI projects**
- **Research publications or coursework in NLP, computer vision, or reinforcement learning**

**What You'll Get:**

- **Mentorship from experienced AI engineers and researchers**
- **Exposure to real production systems and modern AI tooling**
